### 1. Introduction

This is a consecutive course of IE1. In this course, we will continue to use JAVA as the main programming language by referring to the same textbook "Java: How to program". In IE1, we have learnt the fundamentals of Java, such as how to input and output data stream, various control structures, the concept of methods, the purpose of methods, how to define methods, arrays, and arraylist, most of which are common to all other programming languages.

In this course, we will focus more on the unique features of Java itself, such as inheritance, polymorphism, GUI components, Graphics, etc., and file processing, recursive, etc., by mastering which would strengthen your programming capability.
